

SP-910

Multi-Parameter Portable Water Analyzer

Product Description

The SP-910 is a multi-parameter and multi-wavelength fluorometer, colorimeter and turbidimeter specifically designed Municipal, Environmental and Industrial water analysis. For industrial water treatment applications utilizing fluorescent tracer chemistries, the SP-910 is ideally suited with integrated direct read testing for Fluorescein and PTSA. The SP-910 uses industry standard colorimetric reagents (HACH® and Pyxis) and provides colorimetric measurements at 7 LED wavelengths. The SP-910 is pre-calibrated for colorimetric measurements of analyses common in industrial water treatment and other water testing in the laboratory. In multiple side-by-side validation and comparison studies, the SP-910 has proven to be statistically more accurate than other devices on the market. The SP-910 contains multiple methods compliant with APHA/USEPA/ISO guidelines for drinking water and municipal water application analysis as well as True Turbidity (White Light/InfraRed) direct read method. Please reference SP-910 procedure manual for detailed list of agency compliant methods. The SP-910 also contains numerous unique Pyxis Lab direct read and wet chemistry methods not available in other market devices.
